# Experiment 3

**Aim:** To add header, footer and CSS to existing homepage.

## HEADER:
The <header> element represents a container for introductory content or a set of navigational links.
A <header> element typically contains:
•one or more heading elements (<h1> - <h6>)
•logo or icon
•authorship information
You can have several <header> elements in one document.

## FOOTER:
The <footer> tag defines a footer for a document or section.
A <footer> element should contain information about its containing element.
A <footer> element typically contains:
•authorship information
•copyright information
•contact information
•sitemap•back to top links
•related documents
You can have several <footer> elements in one document.

## CSS:
CSS stands for Cascading Style Sheets
•CSS describes how HTML elements are to be displayed on screen, paper, or in other media
•CSS saves a lot of work. It can control the layout of multiple web pages all at once
•External stylesheets are stored in CSS files.
